Change in the 14 extreme indices · domain 11–16 °S, 70–75 °W · 2035–2064 vs 1985–2014

Point: median of 10 CMIP6 models · bar: range of 80 % of the models (P10–P90)

TX90p and TN10p count the days per year above (or below) the 1985–2014 threshold; today there are about 36. In the tropics temperature varies little from day to day, so with +4–5 °C almost the whole year exceeds that threshold.
