Where will the climate of Cusco change most by the end of the century?

Change in 2071–2100 relative to 1985–2014, cell by cell (10 km). Median of 10 CMIP6 models bias-adjusted with QDM.

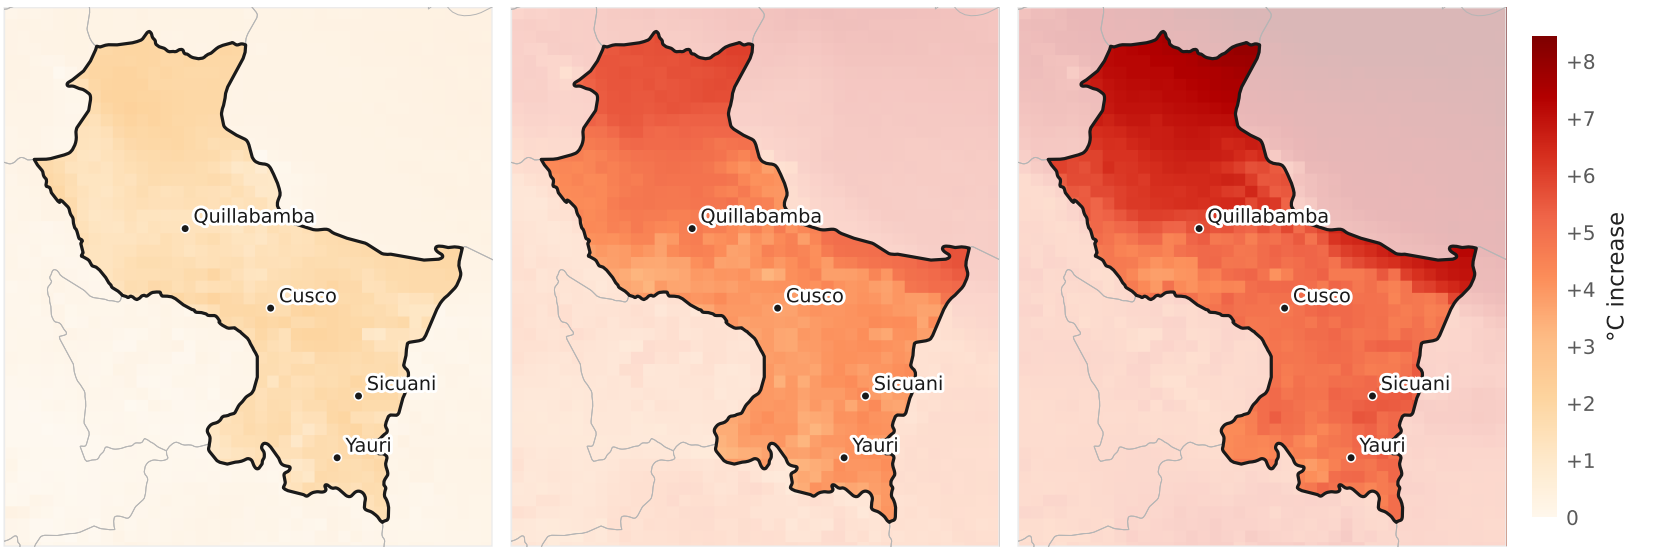

SSP1-2.6
low emissions

SSP3-7.0
intermediate-high emissions

SSP5-8.5
very high emissions

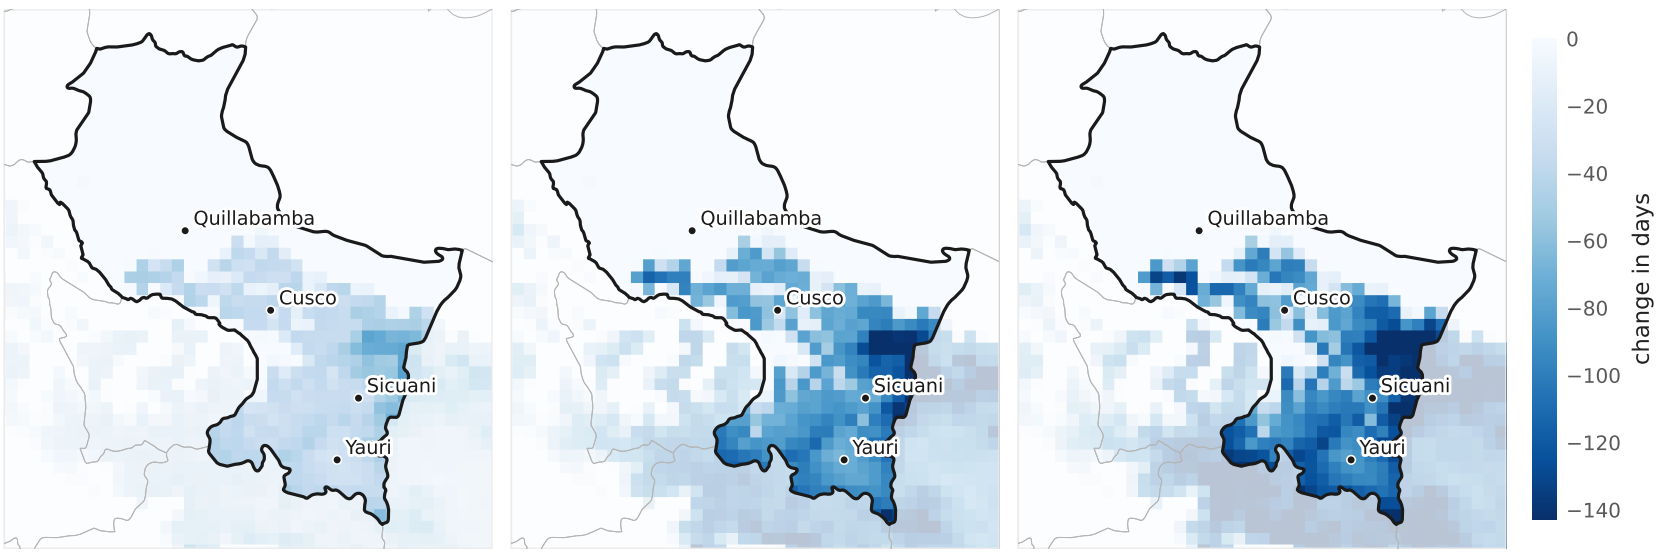

Maximum extreme temperature (TXx)

hottest afternoon of the year

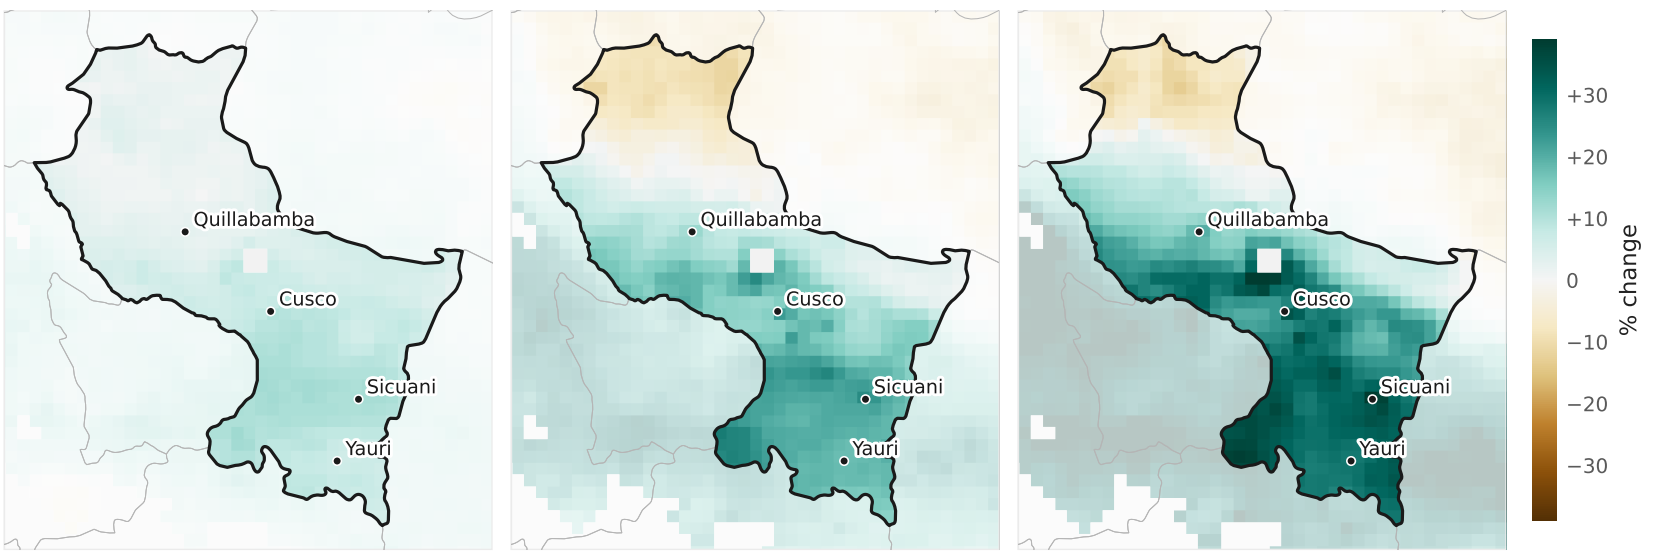

Frost days (FD)

days per year with minimum below 0 °C

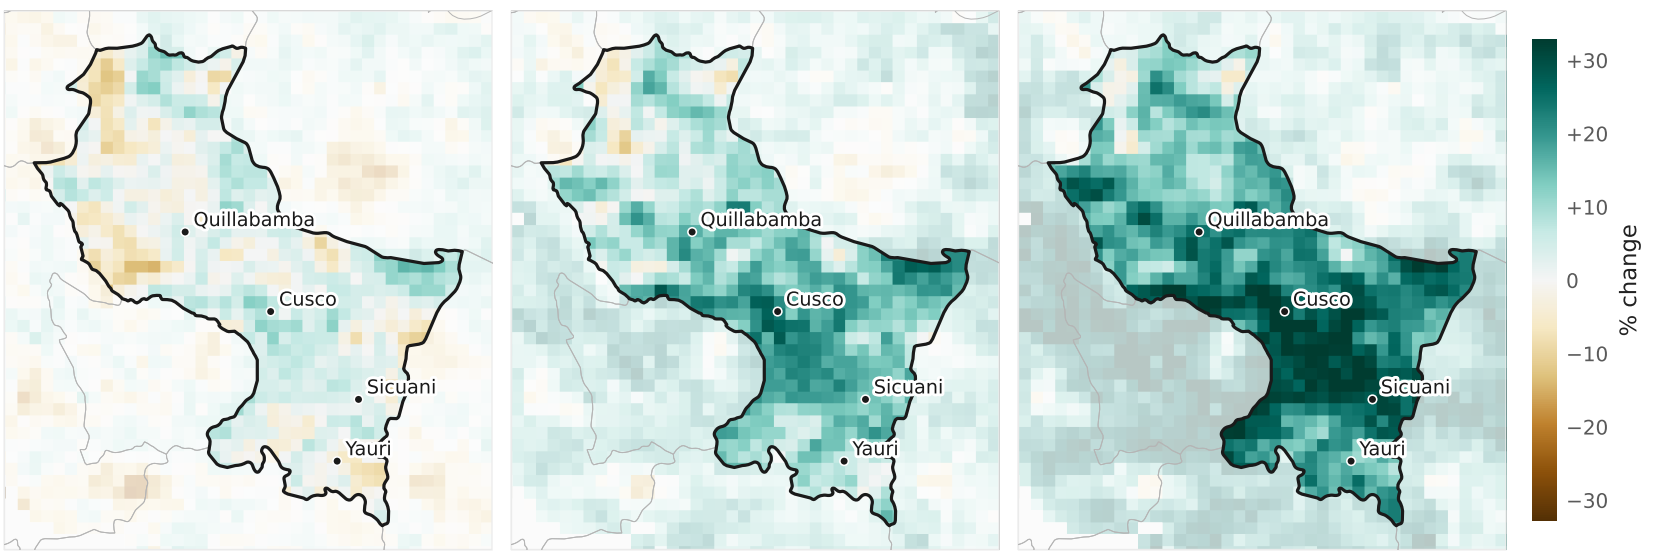

Annual total precipitation (PRCPTOT)

rain over the whole year

Maximum 1-day precipitation (Rx1day)

heaviest downpour of the year

Black line: Cusco department (region); colours are faded outside it. Near-rainless cells have no data. Index names follow the ETCCDI. Source: CMIP6-CUSCO, PISCO (SENAMHI).
